Commentary

Interpretation of Participant Summary Charts:

The first chart indicates the number of participants reporting Above or Below Cutoff for the respective cartridges. This is the only graded portion of this program. The ***** flagging indicates an incorrect response for that cartridge based on peer consensus and a participant will be penalized for reporting that result.

The rest of the charts indicates the number of participants reporting Positive or Negative for CTC for each individual event for the respective cartridges. Please note that the events are listed horizontally, left to right so that Events 1 - 5 are on the first row, Events 6 - 10 are on the second row, left to right, etc. The gray shade indicates the incorrect response for that event based on peer consensus. When there is no consensus in an event, the event is highlighted yellow. See below for the intended results for the yellow highlighted events.

Please note that the following comments are based on the intended result and may not necessarily reflect the group majority for that event.

Cartridge 000132 Event 17

CTC

There are shades of gray in the DAPI image and the DAPI image is clear enough to accurately determine size and alignment relative to the CK image.

Cartridge 000133 Event 3

CTC

A dim DAPI image is visible. It can be confirmed by zooming in on the DAPI channel.

Correct responses are defined as those reflecting agreement among 80% or more of all participants.

Shading indicates results which do not agree with peer consensus.

Unacceptable responses are indicated by "*****" on the Flagging line of each specimen.
